

Chris Reynolds

Staff Product Manager · AI & Operations Automation · 10+ years at Amazon, Google, and Collectors · 5 patents

Long Beach, CA · reynoldscg@gmail.com · reynoldscg.github.io · linkedin.com/in/reynoldscg · github.com/reynoldscg

Staff Product Manager who turns expensive manual operations into AI-powered platforms: **more than \$50M in operational savings** across Amazon, Google, and Collectors, from YouTube's help-center platform that deflects **30%+ of support contacts** to ARSAW, the pick station in every Amazon Robotics fulfillment center. Lead a team of 3 PMs automating grading at a 30,000-submission-a-day operation. Technical enough to prototype in Python and SQL, experienced enough to know which problems actually need AI and which need a better process.

WORK EXPERIENCE

Collectors

Mar 2024 – Present

Staff Product Manager · Santa Ana, CA

Lead a team of 3 PMs, and mentor 2 more product contributors, driving the AI transformation of grading operations at the parent company of PSA, the world's largest collectibles authentication and grading service, processing ~30,000 submissions a day.

- Defined and launched a **multi-model AI pipeline** (LLM-based image matching, counterfeit detection, quality grading, and computer-vision QC) that makes submission-eligibility decisions previously requiring manual expert review, removing the bottleneck that capped throughput.
- Delivered a **40% throughput increase** by redesigning the end-to-end grading workflow, pairing the AI pipeline with a ground-up UX overhaul.
- Consolidated five legacy desktop tools into a single operator platform: **20% fewer mis-shipments** and cross-team handoffs, **40% less new-hire training time**, and measurably higher operator morale.
- Won AI roadmap approval from Director through C-suite **three weeks faster** than the prior process by shipping working prototypes instead of specs.

Google

Aug 2021 – Mar 2024

Senior Product Manager · Los Angeles, CA

Product lead for YouTube Help Center Support Intelligence: AI-driven deflection and self-service for one of the world's highest-volume consumer support operations.

- Launched the ML personalization layer for YouTube's help center on Google's internal ML infrastructure, deflecting **30%+ of all support contacts** before case creation. At \$19 per contact, that is **tens of millions of dollars** in annual cost avoidance.
- Defined the intent-prediction signal model with Data Science, mining support history, behavioral trends, and engagement signals to intercept high-intent users before agent contact without degrading resolution quality.
- Drove the audience-segmentation strategy that balanced automation aggressiveness against churn risk, protecting high-value cohorts while expanding self-service across high-volume, low-complexity contact types.
- Owned help-content accuracy and discoverability across regions and languages, aligning engineering, data science, and CX teams across three organizations without direct authority.

Amazon *Ring*

Sep 2020 – Aug 2021

Senior Product Manager · Los Angeles, CA

Owned CRM and support automation for Ring's global customer experience organization, serving agents in 6 languages.

- Launched **Neighbor Dashboard**, a Salesforce-integrated agent workstation that replaced Ring's legacy Admin Panel by surfacing the most diagnostically relevant customer context first: **29% lower triage volume** and **35% higher resolution efficiency**.
- Shipped real-time contact-intent detection that showed agents the predicted reason for contact, speeding diagnosis and deflecting the most common categories before escalation.
- Led enterprise-wide PII masking across all agent tooling and defined the multi-year strategy for bringing Ring device and camera data into the global support platform.

Senior Innovation & Design Engineer · Seattle, WA

Led end-to-end design of fulfillment and robotics systems for Amazon's global network; managed a team of 4 engineers.

- Invented and led the design of **ARSAW**, Amazon's primary semi-automated pick station, now deployed in every Amazon Robotics fulfillment center worldwide: **\$0.011 saved per unit** across billions of units a year. Holds **5 patents** from this system and related work.
- Led building design for **11 Amazon facilities** from concept through launch, spanning full-scale robotics, make-on-demand, and manual operations: topology optimization, site planning, operational flow, vendor coordination, and execution.
- Standardized bespoke automation into reusable design systems adopted across Amazon's global fulfillment network.

SKILLS

Product	Product strategy & roadmaps · 0-to-1 launches · Operations automation · Platform & workflow design · Product analytics · People management · Exec stakeholder management (Director to C-suite)
AI / ML	LLM product design · Evals & quality measurement · Computer vision QC · Prompt design · Model selection, cost & latency tradeoffs · Rapid AI-assisted prototyping
Technical	SQL · Python · APIs & integrations · Data analysis · Technical documentation
Tools	Figma · Jira · Confluence · Salesforce · Sprinklr · LLM APIs (Anthropic, OpenAI, Google)

BUILDING

Wall Dashboard. Self-hosted Raspberry Pi wall display: clock, weather and AQI, photo slideshow, Google Calendar, and live solar production. Python, JavaScript, shell. github.com/Reynoldscg/Wall-Dashboard

Break Dashboard. Break-compliance kiosks for Toast POS restaurants: Raspberry Pi displays driven by a shared Cloudflare Worker so credentials never touch the device. Python, JavaScript. github.com/Reynoldscg/break-dashboard

EDUCATION

Master of Business Administration (MBA)

2019

Arizona State University

*Concentration: Strategy and Supply Chain Management***Bachelor of Science in Civil Engineering**

2014

Washington State University

Activities: Steel Bridge, Concrete Canoe, Formula SAE
